

Fick Bros Roofing & Exterior Remodeling Company is licensed with the Maryland Home Improvement Commission (MHIC License #1256) for your protection.

We are members of Certified Contractors Network (CCN), Better Business Bureau (BBB), National Roofing Contractors Association (NRCA), Mid-Atlantic Roofing Contractors Association (MARCA), and National Association of the Remodeling Industry (NARI), Maryland Improvement Contractors Association (MICA), Home Builders Association of Maryland (HBAM), Associated Building Contractors (ABC), National Slate Association (NSA), and Cedar Shake & Shingle Bureau (CSSB). As a legitimate and dependable exterior remodeling company, we maintain these affiliations and credentials to provide you with the highest level of confidence and customer service. We are registered, licensed, and approved with many manufacturers for the installations of premium construction products. Our mechanics and estimators are qualified Master Shingle Applicators (MSA), and attend pre-approved on-going training to keep them up to date on the latest technological advances in contracting including the local building codes and the NRCA specifications.

We are EPA Lead Paint Certified, Certified Installers for all types of roofing, siding, windows, doors, and various exterior products; as a result we can offer the best most comprehensive warranties in the industry -- making Fick Bros the customers' safest and best choice in roofing and exterior remodeling.

Fick Bros is a CertainTeed Select Shingle Roofer; only 1 out of 100 roofing contractors nationwide have achieved this status. We use CertainTeed roofing products because of their commitment and support to roofing contractors. With over 100 years in the business, CertainTeed produces superior asphalt shingles and back them with their SureStart™ warranty. An upgraded warranty ONLY available, provided the roofing contractor is a Select Shingle Roofer. Through their Master Shingle Applicator and Quality Master Certification programs, CertainTeed provides extensive training and independent testing for our roof mechanics, foremen and estimators.

We pride our self on the consistency of our quality through internal and external training. The performance of the materials is a direct function of the workmanship with which they were installed. The roofing and exterior remodeling industry is not regulated like plumbers or electricians, which require standard training and inspection of each project. The resulting quality deficiencies can be seen by the significant failure rate of the companies involved and the roofs installed.

With a permanent place of business and over 95 years in the construction industry, we take pride in our quality workmanship and the specialty services offered to our clients.
